

Don't Flush That!

Did you know that the only product designed to properly break-down when flushed is toilet paper?

Even products labeled as 'flushable' will potentially cause a clogged toilet, drain or sewer main.

NEVER FLUSH any type of wipe, paper towel, personal hygiene item (such as cotton swabs or sanitary products), medications, food, pet litter, diapers, facial tissue, hair, band aids, gum, contact lenses, product wrappers, cigarettes... etc.

Make sure you know how to turn your water off in an emergency—the interior shut-off valve should be located just below the meter!
